SOB40-7-F

CURRENT POPULATION SURVEY

INTRODUCTION:

The Current Population Survey (CPS) is a monthly survey conducted by the U.S. Census Bureau. Although the main purpose of the survey is to collect information used to produce employment statistics, a very important secondary purpose is to collect information on the demographic/economic status of the population. This is accomplished by adding a supplemental set of questions to the March CPS. The CPS uses a sample of approximately 60,000 civilian noninstitutional households in the U.S. (6,000 in California).

The following profile includes selected items from the 1976-1985 CPS files. Three pages are devoted to state level data for each year, one page each is devoted to time series data for the periods of 1976 to 1980 and 1981 to 1985 for the State and the seven largest SMSAs within California.

CAVEATS:

All estimates developed from the CPS are subject to sampling error. The magnitude of the error is proportionally related to the size of the population being estimated. Estimates for the nation are better than estimates for the state. Estimates for a large segment of the state (total white population) are better than estimates for a smaller segment (total black population). Users are cautioned about looking at an estimate only for one point in time. Users should study the estimate over a period of time to determine its stability.

The sample design and methods of weighting CPS data are geared towards producing estimates for the entire nation. Consequently, state and SMSA level data will not be as reliable as national data.

The CPS methodology is reviewed annually and revised as necessary to improve the reliability of the data. These procedural changes impact the estimates and the user should be aware of this when doing a time series analysis of the data.

For the purpose of simplifying the race/ethnicity tables, the categories were derived in such a way as to be mutually exclusive. Each person was categorized based upon his/her response to the race and Spanish origin questions. The response to the Spanish origin question took priority in determining race/ethnicity.

The 1976-1980 profiles were developed by using the 1970 Census as a benchmark. The estimates in the 1981-1985 profiles were developed by using the 1980 Census as a benchmark. The change from a 1970 benchmark to a 1980 benchmark significantly alters the CPS estimates from the 1980 profile and the 1981 profile.
